

DLS 100, Dual Liquid Sprayer

Portable Dilution Control System

Dilution Control Just Went Mobile

Introducing the first generation of intelligent chemical dispensers for janitorial, industrial, and institutional packaging: the dual-liquid sprayer (DLS). Integrating dilution-control with dual-liquid dispensing technology, the DLS is the smartest way to dilute concentrates with only the pull of a trigger. An advanced metering system within the concentrate bottle allows the flexibility for one sprayer to dispense ready-to-use cleaners at a consistent ratio from 1:1 to 40:1.

Ideal for:

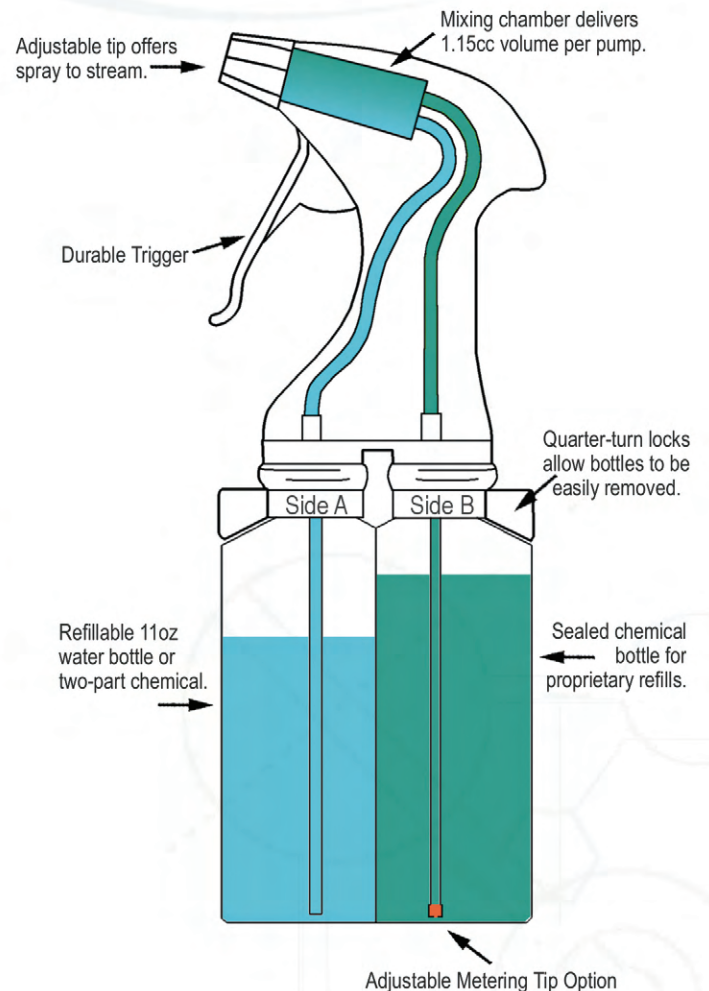

Two-part Reactive Chemicals

Concentrate Chemicals

Multi-purpose Cleaning Chemicals

- Fixed ration options from 1:1 to 40:1.
- "Side A" bottle easily refillable by user.
- Color coded ratio plugs seal "side B" bottle.
- Long-lasting sprayer made in the USA.

The high-longevity DLS sprayer mixes concentrated liquid products reducing packaging waste and transportation costs, making it an essential component to all pre-cycling programs.

The DLS 100 dispenses two liquids at the same time at a predetermined, fixed dilution ratio, making it ideal for dispensing concentrated liquids and two-part reactive chemicals. This high quality sprayer system is perfect for use with disposable refills.
